

KF717

• SOLID CONTINUOUS CENTER-ING RIB

center solid rib improve high staight-line stability while the small lateral grooves provide optimal braking performance.

• OPTIMIZED DESIGN OF LATERAL AND LONGITUDINAL GROOVES

Increased contact area give an extra grip ability, enhance controllability and braking performance.

• 4 MAIN WIDE LONGITUDINAL GROOVES

4 main wide longitudinal grooves enhances water evacuation, improve cornering and handling performance on wet ground.

• CONTINUOUS AND INSEPARABLE SHOULDER DESIGN

Extensive sipes design enlarge rubber-to-road contact area, improve the cornering controllability and stability, especially at high speed.

Let's go future
